

Researchers would manage to recognize the basic standards of Journals to Data Sharing Policies

Maria Vivas-Romero

Data Steward

m.vivasromero@maastrichtuniversity.nl

Educational Context

Learning Outcomes:

Researchers would be able to recognize Journal's Basic Policies of Data Sharing

Researchers would be able to choose a repository/place to register their data or meta-data

Researchers would be able to identify who to contact to begin the process of following Journal's Data Sharing Policies

Audience:

Researchers

Data Stewards

Data Professionals

What are Journal's Data Accessibility Policies? Why do they matter?

Journals have designed a number of policies that researchers must comply with to publish their research results regarding the data linked to their outcomes.

Your article will not be published unless the reviewers judge your accessibility efforts consistent with their policies

How to comply with Journal's Data Accessibility Policies?

Write a Data Availability Statement: A document that describes the data's location, the accessibility of it, and the restrictions

Make data available in a repository of choice: This means making the data or meta-data available in a repository with the help of a Data Steward

Making both of these efforts is possible by contacting the Data Steward of your Faculty

Next Steps:

Draft an availability statement
using the examples provided
(template would be available)

Explore our local repository:
DataverseNL to look at examples

Contact your Data Steward to
finalize the process
